PROJECT

Aldi Head Office

Location: Atherstone

A £70m investment has added more than 150,000 sq ft to Aldi's Atherstone Head Office, including a new 'Taste Kitchen', a cutting edge development space to create and test new products.

The third phase of Aldi's head office expansion plans to add a 120,000 sq ft development on land adjacent to the current site.

M&E Contractor: Re-Carb Engineering, Wolverhampton

Specification: Wide range of malleable pipe fittings

Specification

Pipe Threads

The machined threads of Crane fittings are supplied to conform with the gauging requirements of BS EN 10226-2. Threads on all fittings are chamfered to assist assembly and avoid 'cross threading'. Female fittings have a chamber behind the thread, permitting the male thread to be assembled without restriction or 'bottoming'.

Design Standards

ISO 49 is the international standard for 'Malleable cast iron fittings' threaded to ISO 7-1.

BS EN 10242 is the British European Standard for 'Threaded pipe fittings in malleable cast iron' first published in August 1995 and very closely follows ISO 49.

All European Standards have to be adopted by the member countries of the EU and any conflicting national standards withdrawn. BS 143 and 1256 has been retained to cover those fittings not in BS EN 10242. It should also be noted that BS EN 10242 details a number of fitting types and sizes which were not included in BS 143 & 1256 because they were not in regular demand and/or not available from UK manufacturers. BS 143 & 1256 specifies requirements for the design and performance of 'Malleable cast iron and cast copper alloy threaded pipe fittings' and has developed over many years.

BS 143 & 1256 were amended in August 1995 to delete those fittings now covered by BS EN 10242, so the scope of BS 143 & 1256 is now essentially:

(a) BS 143 design and BS 1256 design fittings in malleable iron not covered by BS EN 10242,

(b) BS 143 design fittings threaded to ANSI B1.20.1 (NPT)

Conformance of Crane Fittings

Both malleable iron and steel fittings have been verified by the British Standards Institute (BSI) as conforming to BS EN 10242 and BS 143 & 1256, as appropriate, and as such are permitted to bear the British Standards Kitemark Logo - Kitemark Licence No. KM00382.

Some small size fittings are manufactured in steel and will conform to BS EN 10241.

UL Certified Products

Many malleable fittings are covered by UL certification. UL is a global leader in testing, inspection, certification, auditing and validation. UL Listing means that UL has tested representative samples of the product and determined that it meets UL's requirements. These requirements are based primarily on UL's published and nationally recognised Standards for Safety. UL approved fittings have been approved for use in fire protection such as sprinkler systems. Malleable Fittings Covered: 140, 144, 145, 146, 147, 148, 149, 150, 151, 152, 155, 156, 161, 171, 177, 179, 185, 192, 193, 197, 199.

Constructed of blackheart malleable iron according to Standard BS EN 1562, Grade EN-GJMB-300-6 Fittings may also utilise an optional zinc coating (galvanised) as described in BS EN 10242.

For the details of the fittings range covered see the UL Certifications Directory at: www.ul.com/database.

The Pressure Equipment Directive 2014/68/EU (PED)

The Directive applies to the design, manufacture and conformity of pressure equipment and assemblies of pressure equipment with a maximum allowable pressure greater than 0.5 bar. Individual piping components, such as fittings, are excluded from the scope of the Directive and therefore cannot be CE marked. However, Crane pipe fittings are manufactured to the appropriate European standards and satisfy the essential safety requirements of the PED.

Key Features

- **Taper to taper thread joints ensure full engagement, eliminating localised stress on pipe or fitting, and offering a substantial pressure seal**
- **Design standard BS EN 10242**
- **Thread standard BS EN 10226-2 taper**
- **UL approved for use on sprinkler systems**
- **Kitemark approved by BSI**

Specification

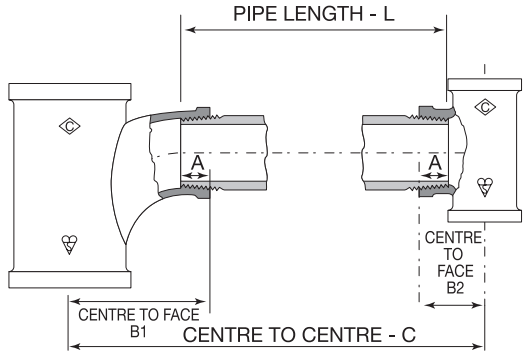
Piping Installation

The below information is compiled from British and International standards on Pipe Threads BS EN 10226 (supercedes BS 21) and Pipe Fittings standards BS EN 10242, BS 143 & 1256 and ISO 49.

Much unnecessary labour and creation of random lengths of pipe might be saved by the application of a few simple figures by the engineer when erecting the pipe line. Generally the pipeline, section by section, is either accommodated within fixed limits, usually the lines of building construction, or is fixed by prescribed dimensions. Except in the case of a continuous run of piping connected either by sockets or flanges, the engineer needs to know the length of pipe required to make up between fixed positions of fittings prior to cutting and threading.

The diagram below and table of 'A' dimensions indicates the length of thread engagement of BS EN 10226 taper pipe threads in nominal sizes 1/8 to 6 inch.

The approximate pipe length is calculated by using the expression L = C - (B1 + B2) + 2A.



'A' Dimension Information

FITTING SIZE (inch)	A (mm)
1/8	7
1/4	10
3/8	10
1/2	13
3/4	15
1	17
1 1/4	19
1 1/2	19
2	24
2 1/2	27
3	30
4	36
5	40
6	40

Dimensions given do not allow for tapping or threading tolerances.

Pipe Ends

Users are advised to ensure that the external threads on the pipe being screwed into Crane fittings are free from damage or any malformation and conform to the gauging requirements of BS EN 10226.

Specification

Designation of Fitting Size

The designation of fitting size for the fittings shown in this catalogue is as follows:

EQUAL FITTINGS: Equal fittings where all outlets are the same size are designated by that one size, irrespective of the number of outlets.

UNEQUAL FITTINGS: Unequal fittings (reducing or enlarging) are specified by the sizes of each outlet, the sequence being dependent on the number of outlets:

(a) For fittings having two outlets, the larger outlet is specified first.

Example: Fig. No. 145 hexagon reducing nipple with one end threaded size 2 and other end threaded size 1, is designated 2 x 1.

(b) For fittings having more than two outlets, Crane uses BS EN 10242 method (b) which gives the run as the first and second sizes of the designation and the branch as the third size of the designation.

This is in contrast to BS EN 10242 method (a) which gives the run as the first and third sizes of the designation and the branch as the second size of the designation. This method is used in certain international markets. (Please see the diagrams below for a visual explanation).

BS EN 10242 method (a) equivalents are specified in this catalogue where applicable.

UK method
BS EN 10242 and ISO 49
Method (b) as used by Crane.

Malleable Cast Iron

Crane malleable iron is of the Blackheart type ideally suited to pipe fitting and manufacture and conforms to BS EN 1562 Designation EN-GJMB-300-6, ASTM A197 and ISO 5922.

The close relationship between the physical properties of test bars and actual castings ensures design integrity and the preservation of high safety factors. Shock pressures within pipe systems can be tolerated with complete safety.

Mild Steel

BS 143 and 1256 allow small size ($^{3}/_{8}$" and smaller) straight fittings to be supplied in other ferrous materials eg. mild steel, as an alternative to malleable cast iron, providing the mechanical properties are at least equivalent to the specified grade of malleable iron.

Individual data pages state which Crane fittings are supplied in mild steel.

Galvanising

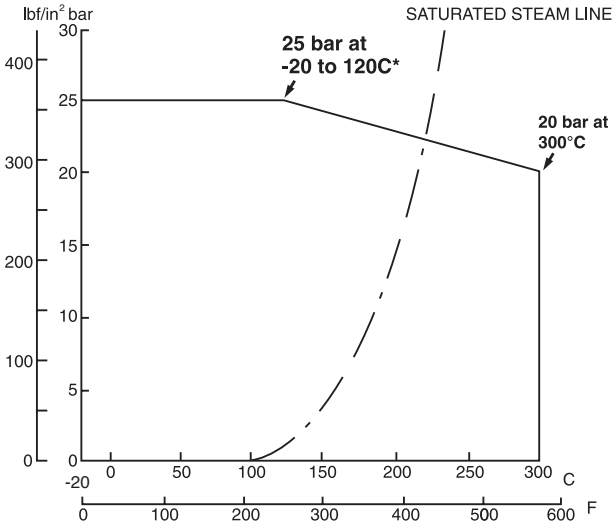
Where additional resistance to corrosion is required, malleable cast iron fittings can be hot-dip zinc coated (galvanised) prior to machining. This process involves coating the fittings with zinc which, in addition to its natural resistance to corrosion, provides electrochemical protection where the iron of the fitting is exposed by damage. Mild steel fittings can be supplied with a proprietary zinc-based coating.

The coating requirements on Crane galvanised fittings meet or exceed the requirements of BS EN 10242 with a minimum coating of 500g/m² corresponding to a thickness of 70µm.

When ordering galvanised or zinc coated fittings add the suffix 'G' to the figure number.

Specification

Pressure/Temperature Ratings



*Hot dip zinc coated (galvanised) fittings should not be used below -10°C (14°F).

Figure No. 241 unions are limited to 230°C maximum.

Figure Nos. 271, 272 and 289 unions are limited to 208°C maximum.

Dimensions given do not allow for tapping or threading tolerances.

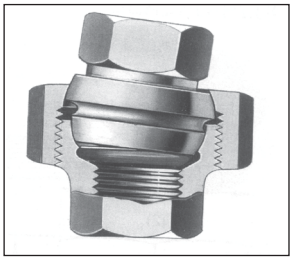
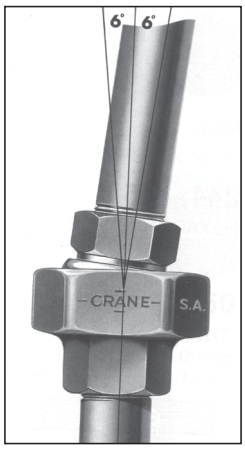
The Crane SA (Self Aligning Union)

The Crane SA Union is made with double spherical seats. Pipes which are not in alignment can be securely connected at any angle up to 6° of arc from centre line of the union, thus avoiding the need for offsets. The union provides a pressure tight joint without the use of gaskets or washers.

- Self aligning (SA) Union
- Double spherical seats
- Iron to iron seating
- Taper threads to BS EN 10226
- Black or Galvanised



SA Union - female



6° out of alignment and still pressure tight

PROJECT

ABC Verdun

Location: **Beirut**

A $300M development, comprising a 10,000m2 ABC department store as well as housing 6,000m2 of entertainment & leisure facilities and 1,800 m2 of garden space, fronted by boutique retailers and cafe seating.
